Live/VOD programs Unicast(HTTP)

Live/VOD Programs Multicast(UDP)

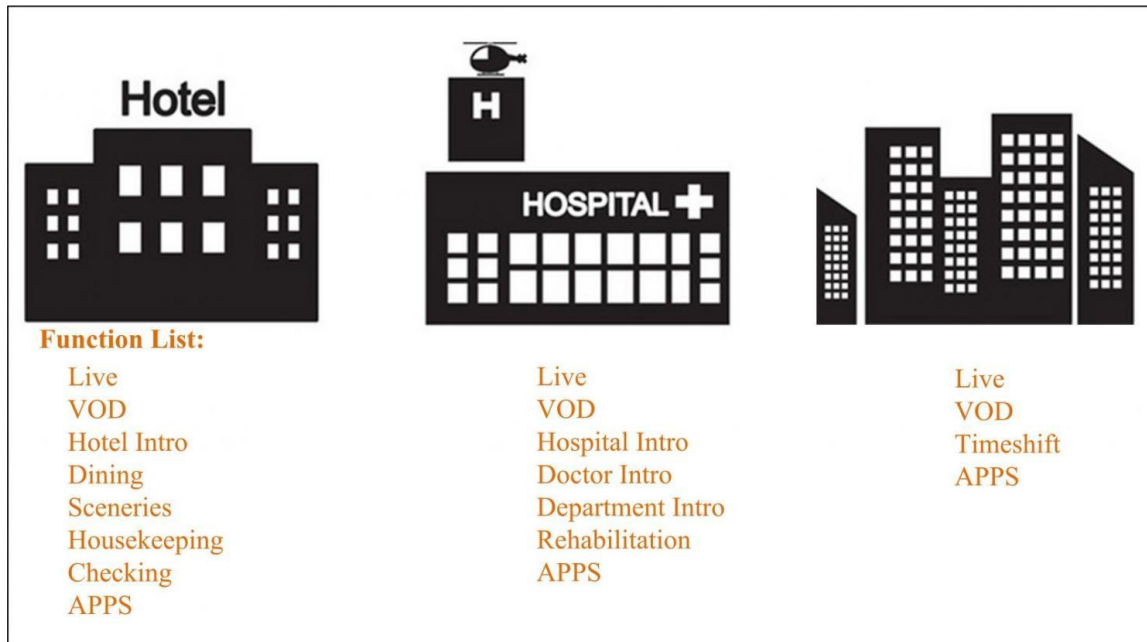

Product Overview

The FMUSER IPTV System is a multifunctional platform supporting Live TV, VOD (1080P/60Hz), CAS, and PMS integration via IP output. It processes satellite/cable signals and hotel-generated content through hardware decoding and ad insertion. The 1U rack-mountable unit is controllable via web-based NMS, designed for hotels and hospitals to enhance guest services and operational workflows.

Key feature

Features web-based NMS control for centralized system administration

Functions

Advantages

Live Channel/Playback

Support HD/SD cable channel, satellite channel and hotel self-made channel broadcast

Support playback shifted live channel, shifting duration can be customized

VOD

Support up to 1080P/60Hz full HD video

Support hardware decoding, play HD videos smoothly

Classify movie files, convenient for selecting

Advertisement System—Value added Services

Hotel or hospital owners can set up advertisement business to increase revenues.

Ad modes include booting ad, VOD ad, pictures and text ad etc

Mass HD Programs

Support 1080P/60Hz full HD video

Mass resource of Video on Demand including movies, entertainments, factual shows and etc

CAS (Conditional Access System)

Our conditional access system gives the customer choice over pay channels and which prevent unauthorized access.

PMS integration

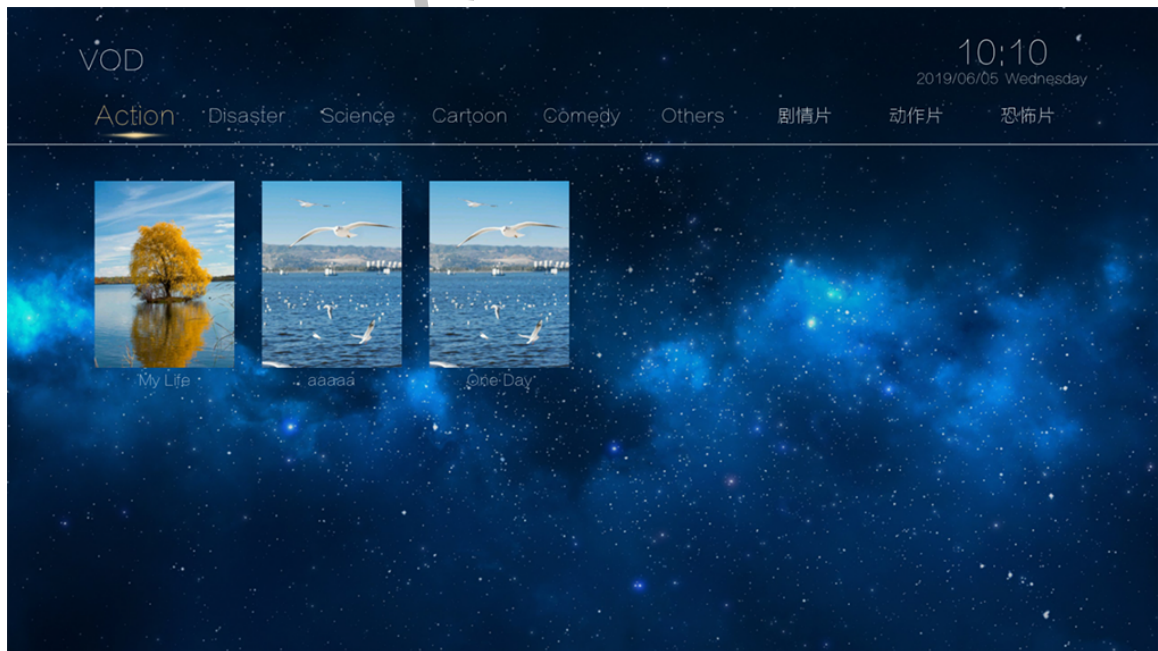

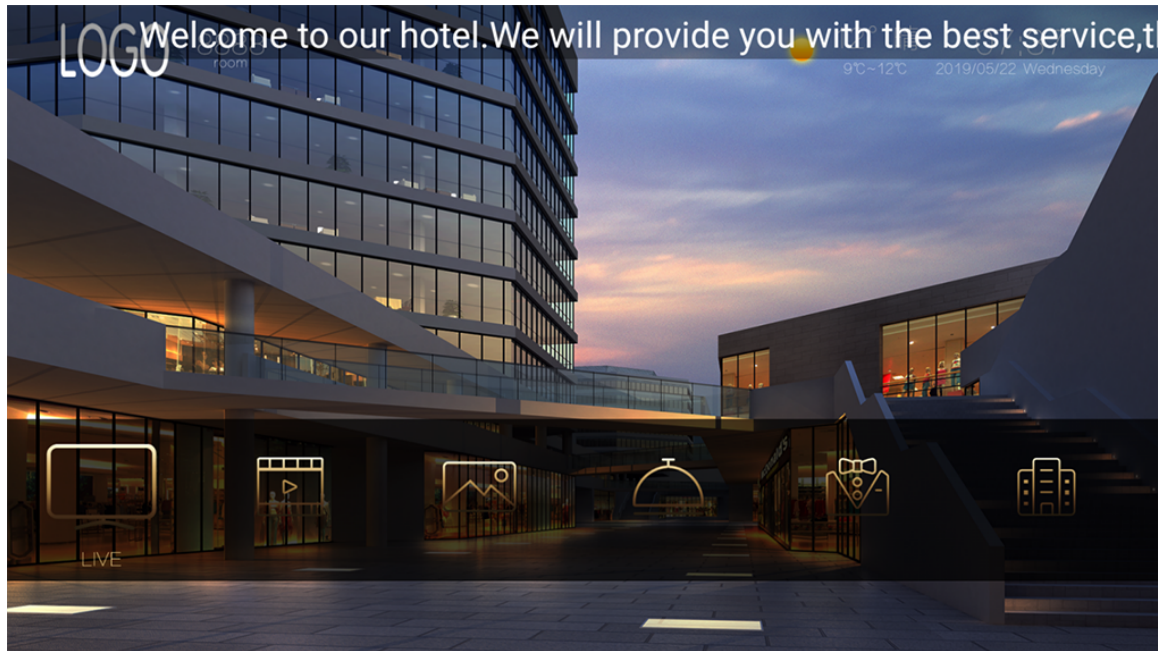

Support IPTV system integrate with hotel PMS

IPTV Server Recommended configuration

Number of STB	Server Configuration	Server Configuration	Server Configuration	Switch	Remarks
300≤	IPTV Server■ Dell730	CPU: Xeon E5-2609 v3 Memory:16G Network: Four-port Gigabit NIC Storage■configure as needed (suggest 1T above)	1 set	Gigabit	If the UDP protocol is adopted in live services, switches of access layer should support IGMP protocol.
500≤	IPTV Server■ Dell730	CPU: Xeon E5-2640 v4 Memory:32G Network: Four port Gigabit NIC Storage■configure as needed (suggest 1T above)	1 set	Gigabit	(1) If the system has high requirements for VOD services and video playback services, like online VOD is with over 300 terminals, it is strongly suggested to configure a storage server. (2) If the UDP protocol is adopted in Live services, Switches of Access Layer should support IGMP protocol.

500≤	IPTV Storage Server■OceanStor S2200T	Cache■16G Storage■configure as needed	1 set (Optional)	Gigabit	(1) If the system has high requirements for VOD services and video playback services, like online VOD is with over 300 terminals, it is strongly suggested to configure a storage server. (2) If the UDP protocol is adopted in Live services, Switches of Access Layer should support IGMP protocol.
